

## Assignment 5

Make sure to write complete proofs. Try to avoid skipping steps. Write clear sentences.

1. True or False: If the remainder of doing Euclidean Division of  $a$  by  $c$  is  $r$ , i.e. if  $a = qc + r$  with certain conditions on  $r$ , and the remainder of doing Euclidean Division of  $b$  by  $c$  is  $s$ , then the remainder of doing Euclidean Division of  $a + b$  by  $c$  is  $r + s$ . Prove or provide counter-example.
2. True or False: If  $\gcd(a, b) = 1$  and  $\gcd(a, c) = 1$ , then  $\gcd(a, bc) = 1$ . Prove or provide counter-example.
3. Using the Euclidean algorithm, find concrete numbers  $x$  and  $y$  such that  $245x + 356y = 1$ .
4. True or False: For given  $a, b$ , if we can solve  $ax + by = c$ , then we can also solve  $ax + by = d$  for any  $d \geq c$ . Prove or provide counter-example.
5. True or False: The equation  $2x + by = c$  has a solution for all  $c$  if and only if  $b$  is an odd number. Prove or provide counter-example.
